

Domestic Roofing

 **STRATCO**

Crafted with style, designed and manufactured with pride. Stratco Roofing is an investment in your home's future that will withstand the rigours of weather and time.

Your architectural dreams are brought to life with a majestic roofing masterpiece.

Art in Steel

Realise your architectural dreams and be inspired by the possibilities, with a roofing work of art in steel from Stratco. Make your new home stand out or bring an existing home up-to-date with a new Stratco Roof. Whether your home is modern or traditional there is a style to compliment your theme.

Choose from a full spectrum of roofing colours to match any mood or environment, from subtle hues, to heritage colours, to modern dramatic shades. Dress your home with a range of cladding profiles to fit any application, choose from: CGI Corrugated, Superdek®, Pro-dek®, Smartspan® and Topdek 700® (check with Stratco in your state for availability).

Invest in Quality

Protect the sanctuary of your home by investing in the quality and durability of Stratco Roofing. Available in zinc/alum or with a colour finish, Stratco Roofing will resist chipping and corrosion for years to come. Continuous steel sheets can be securely fixed to form a valuable barrier to fire and sparks, torrential rain and forced roof entry by thieves. Unlike other roofing materials it is light and easy to install, saving on building costs, and when installed correctly with suitable insulation, it is thermally efficient – cooling down quickly in summer and keeping warm in winter, saving on energy costs.

Stratco Roof Cladding is made from high tensile steel sheet in either 0.42mm or 0.48mm thickness. It is produced in long, continuous sheets to the exact lengths required. This ensures it is weather tight with no unsightly end laps in the middle of the roof. All Stratco Roofing profiles benefit from non-syphoning side laps that minimise the risk of moisture transfer between the sheets due to capillary action.

Roofing Accessories

Complete the package with an impressive range of Stratco Roofing accessories designed to compliment your roof and home. Add the finishing touch with Stratco Ridge Capping, Valley Gutter, and Flashings. Provide ventilation with a turbine ventilator and Stratco Louvred Vents; the natural way to extract heat from your home.

A wide range of guttering, downpipe and steel fascia profiles are available in styles to suit both modern and traditional homes. Enhance your home by mixing and matching the colour of your roof and accessories to either blend together or create a bold and dramatic contrast. Special customised rainheads and metal fixtures can also be manufactured.

Curved Creations

Corrugated steel can be brought to life with new forms created through bullnosing or curving. Bullnosing involves a straight length of sheet metal with a curved end and is commonly found on traditional homes. Curving involves either a concave or convex curve over the whole sheet. Curving allows you to expand your architectural possibilities. Stratco can roll anything from full half circles, to gentle arcs curved to your exact requirements.

Stratco can provide all the accessories to complete your curved creation from wall channels and flashings, to hip bars and curved box gutters.

Maintenance

Stratco Roofing is produced from the highest quality materials and will provide many years of service if the important recommendations set out in the Stratco 'Selection, Use and Maintenance' brochure are followed.
